

Autonomous Vehicles

Self-driving cars incorporate a variety of technologies such as sensors, cameras, LiDAR, and artificial intelligence to operate and navigate without human intervention.

They have the potential to reduce accidents caused by human error, such as distracted or impaired driving, thus improving road safety.

AI-powered technology is already in use in cars made by BMW, Toyota, Mercedes-Benz, Audi, Volvo, Ford, and Tesla, and is sure to revolutionize how people drive—and enable vehicles to drive themselves from Advanced Driver-Assistance Systems (ADAS), to full autonomy
