

ARTIFICIAL INTELLIGENCE and fake news

Artificial Intelligence @username • 3h

It is very difficult to authenticate the source of content. Artificial Intelligence provides certain features which help us rate the news for authenticity and define it as fake. Best way to combat fake: use automated tools.

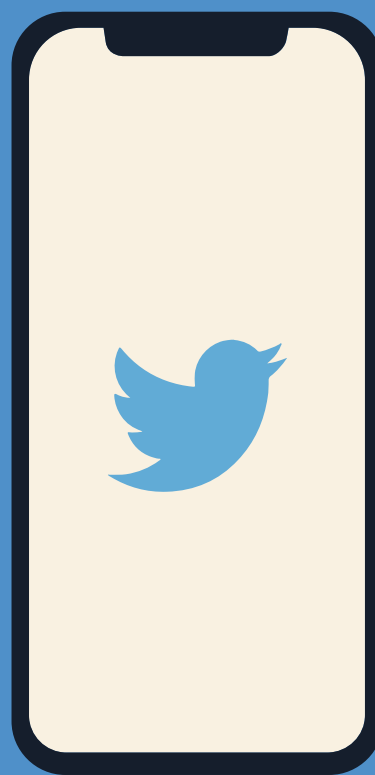

Once big data came into the picture, Artificial Intelligence and Machine Learning tools became more sophisticated and reliable. Still, we need to educate ourselves to be critical thinkers. |

AI can be trained to analyze the text of news articles, blogs, or social media posts, identifying patterns, inconsistencies, and linguistic anomalies that are common in misleading or false information.

AI technologies, like deep learning, can analyze images and videos to determine whether they have been altered or manipulated. Tools like these can help identify fake video content.

Fake News Control

AI systems can continuously learn and adapt to new tactics used in the creation and spread of fake news, staying effective even as tactics change.

don't believe everything
